## DESCRIPTION

This project is about online food delivery management .In which we can make people life easy by delivering food to them at home. Many people due to the lack of time could not enjoy tasty meal. That's why this system is beneficial for them. There is a very deep relationship between such delivery applications and computer science as these all applications are created by computer scientists. Computer science plays an important role in making different business applications and other daily life Problem solving's. In this application people can order different variety of food according to their choice and taste at different prices. There are different fast-food options, some sweet dishes and also some drinks. Here people have an option to give their review about our food. In this application admin can add some new dishes and can also remove some dishes. He can also update the old dishes if chef comes up with a new idea. People have to create an account and also add their address and phone number so we can easily access them. In short this application is very useful for all the users.

## USERS OF ONLINE FOOD DELIVERY SYSTEM

- **Admin:** This system will enable authorized person (admin) to add any product, update any old product or remove any product and also access our address to deliver food at right place.
- **Customer:** This system will enable a client to login with their email account and order different variety of food and also allow a customer to give us the feedback of our food.

## RECOMMENDATIONS:

- We will recommend you the food which is ordered the most.
- We will recommend you the food which is new in our menu.

## VALIDATIONS:

- You can cancel the order in ten minutes otherwise you have to pay for that order.
- Your payment will be added to the next order if it is not received by our delivery boy or not paid by you.
- If the ordered food is not delivered to you at given times then you are given ten percent discount.

## **SORTING:**

- Orders are sorted in such a way whom ordered first will get first

## **FUNCTIONAL REQUIREMENTS**

### **AS ADMIN**

**As an I want to perform**

**So that I can**

<b>Admin</b>	Sign in	Control the online food delivery system
<b>Admin</b>	View order	Note which item is most sold and which item is not liked by customers
<b>Admin</b>	Delete	Delete the item which is not liked by people or in the case there is any problem in making that item
<b>Admin</b>	Update	Update the old item if we get a new idea to make that item
<b>Admin</b>	Add	Add a new item if people are liking our food and chef
<b>Admin</b>	Recommend	Recommend the food which is most ordered or is new in our menu
<b>Admin</b>	Deliver	Deliver the food to customer at their given address and receive the payment
<b>Admin</b>	Receive review	Receive people review about our items and our delivery service
<b>Admin</b>	Sorting	Place the order in such a manner whom ordered first will get it first
<b>Admin</b>	Access address	Access the address and there is no problem in delivery process

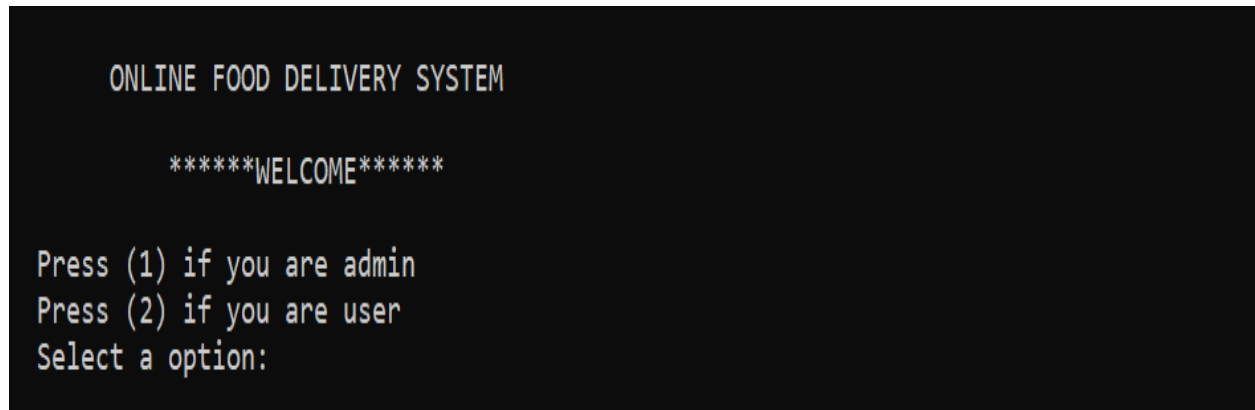

**AS USER**

Remove boldness from this table.

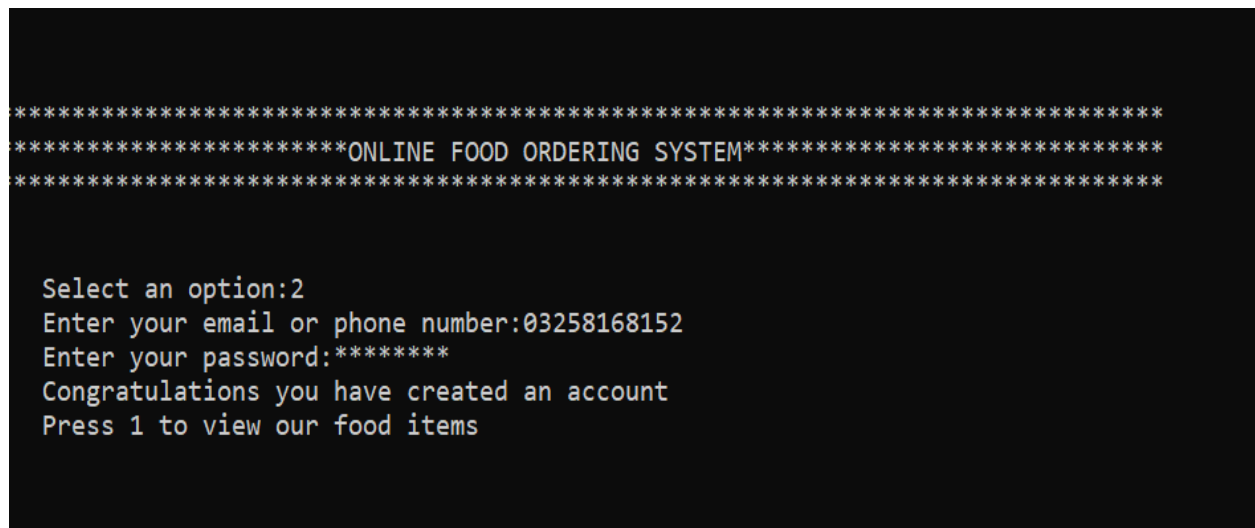

User	Sign in	Create an account on this food delivery app
User	Sign up	Sign up when not using this app
User	View items	View different food items and their prices
